Just ready:

[CAMOENS] OS LUSIADAS (THE LUSIADS): Englished by RICHARD FRANCIS BURTON (edited by his wife, Isabel Burton), 2 vols. 12mo. *pp. xxi and* 471, *cloth, gilt edges, uncut*, 12*s* *Bernard Quaritch*, 1880

Like Shakespeare, Homer, Milton, Virgil, Dante, and Cervantes, Camoens has his votaries throughout the world. One of the master-minds which have stamped literature with the seal of imperishable genius, his *cultus* is not confined to the land that gave him birth nor to the geographical limits of the Portuguese Language. In many countries translators have endeavoured to reproduce the poetry of the Lusiads; and in our tongue there exist numerous versions more or less faithful and ambitious. In 1655, Sir Richard Fanshaw began the series, continued in Mickle, Musgrave, Adamson, Quillinan, Hewitt, Duff, and Aubertin; and now worthily closed by one superior to them all. Captain Burton's work is of peculiar value for several reasons. He was attracted to Camoens by a powerful sympathy, arising from a certain similarity in the lives of the two men and in their modes of thought; and for twenty years of travel and exploration he made the Lusiads his constant companion, drinking in, as it were, the life and spirit of his master, with whom he completely identified himself. His great mastery of the English language has enabled him to overcome the difficulties of exact and verbal reproduction, without losing the sweetness and perfume of the poetry. In fact, only an enthusiastic worshipper, endowed with extraordinary gifts, could have sustained the toil of such a feat, borne unflaggingly and successfully to the end. A few archaisms appear in the translation which, so far from seeming out of place, rather heighten the force and effect of the English poem. It is a work which amply justifies Mrs. Burton's energetic admiration, and must add a new and glorious wreath to the many honours that already crown the reputation of Captain Burton.

"Captain Burton's book will help many to a deeper and more appreciative insight into the great masterpiece of Portuguese literature."—*Manchester Examiner and Times*, *January* 17, 1881.

THE KASIDAH (Couplets) of HAJI ABDU EL-YEZDI: a Lay of the Higher Law, translated and annotated by his friend and pupil, F. B., 4to. *pp. iii and* 33, *sd.* 4*s* *Bernard Quaritch*, 1880

A poem of extraordinary power on the nature and destiny of Man; anti-Christian, and Pantheistic; in which the critic will easily know how to apportion the respective shares of the author and the translator. The notes are packed into fifteen pages of double columns. So much wealth of Oriental learning has rarely been compressed into so small a compass.

BERNARD QUARITCH.

This work of Cuvier is the only one giving an account of the whole Animal Kingdom, and in this last edition every division is edited by a Professor most eminent in his special department of Science. This new edition, which far eclipses all its predecessors for scientific accuracy and beauty of embellishment, was published at 1310 francs (£52. 8*s*) without the binding.

259 CUVIER, ANIMAL KINGDOM, arranged in conformity with its Organization, translated with additional Descriptions, &c. by GRIFFITH, Pidgeon, Gray, and other Naturalists, with classified Index and Synopsis, 16 vols. roy. 8vo. This English edition is quite an original work, not a translation of the French "Regne Animal." Both works, the French and the English, are simply *based* upon Cuvier's original edition of the "Regne Animal," 5 vols. 8vo., but in the above editions vastly extended by the most eminent savans of the present age.

Wynken de Worde, circa 1494

First edition in English of Bartholomew de Glanvile's celebrated work, which may be regarded as a Herbal, as a book of Domestic Medicine, as a Geographical Gazetteer, or as a work on Anatomy and Natural History. It contains likewise essays on the production of colours (Dyeing), on the making of cheese and butter, on the practice and theory of Music, on Mathematics, Arithmetic, etc., and is in fact an Encyclopædia of the then prevalent knowledge. It was one of the most popular books of the XIVth, XVth, and XVIth Centuries; and was translated into most of the European languages. "It is," says Dibdin, "perhaps the most magnificent publication which ever issued from De Worde's press. The paper, press work, and embellishments are perhaps unrivalled by the efforts of any other artist in our country within the fifteenth century." It was printed on some of the earliest paper made in England (see the verses at the end of the vol.), an interesting fact, as showing that splendid paper was manufactured here nearly a century before the time usually assigned for its first production at Dartford in Kent. The John Tate mentioned in the verses at the end of the vol. as the maker of this paper, was probably the Lord Mayor of London in 1496, and knighted for his services against the rebels at Blackheath. The rarity of this book in fair condition is extreme. It is

missing in some of the most celebrated collections of Caxton's, W. de Worde's and early printed books. The Roxburghe copy, wanting two leaves, sold for £70. 7*s*; and Geo. Smith's in 1867 for £116.

Many issues of this popular Library were made, the IMPRESSIONS and COLOURING getting worse and worse. The above are most desirable, perfect and genuine copies.

This scientific condensation of the Philosophical Transactions is a valuable adjunct to the original series, as it not only contains the republication of some rare tracts omitted therein, but also many Biographical Memoirs of deceased Members of the Royal Society, as well as criticisms.

"About seventy inedited species of Birds, Mammals, and other Vertebrata are described in the work, several being types of new or little known Genera."

"Amongst the Invertebrata mention must be particularly made of the division Mollusca, the most copious of all, to which is devoted more than half the plates of the Atlas. This part is more particularly noteworthy for, *firstly*, the full treatment of the Pteropod mollusks, in which the anatomy is fully exposed of every genus of this group, still so little known to naturalists; *secondly*, a similar comprehensive description of the Heteropoda of Lamarck; *thirdly*, the complete Anatomy of the Nudibranchiate Mollusca (Phlebentera), whose curious organization has excited already such numerous comment and observation. Still more, this section contains the anatomical description of several almost unknown genera, and a great number of species equally remarkable. The exact configuration of the animals forms an important feature of the Atlas."

To my Customers in all parts of the Globe.

I beg to state, that I undertake *every* kind of literary COMMISSION: it is my business not only to sell books of my own stock, but also to supply any other old books—new books and periodicals—to sell books on commission; or to publish works for the Author.

My long and well established reputation as a bookseller, and my acquaintance with fine, rare, valuable, and useful works of Science and Literature, enable me to execute orders for books—whether in stock or not—*economically*; while I am frequently enabled to procure articles sought elsewhere in vain at a moderate price.

BERNARD QUARITCH.

☞ **THE CONTINUATION OF THIS CATALOGUE** of works of Natural History, the Sciences and Arts, consisting of about 2000 Articles, will be sent post free to any gentleman favouring the advertizer with 2*s* in postage stamps.
